Dear Lon the nutty Lulu

Your letter arrived this AM and I'll respond now
here at work on break. Congratulations on a full scrotum.
Oh how I love to suck on barbers balls - Yours would be
so tender and it is so safe too. When they told me
3 years ago I had hepatitis and had to practice safe
sex, I learned to adapt. Now I'm adept at getting guys
off by sucking their balls or lickin' them while
I jack 'em off. I try to keep one hand free to
get myself off too or they help me.

2

I taught Ernest that trick and so he has not
had hepatitis ever though I have become a
carrier. The safe sex early start has probably helped
to forestall the onset of AIDS for which I
tested positive in the test of the tests 2 years ago. But
the test ~~over~~ blood was tested with proved not to be
very good and was not the one now in use - However,
Dr Greninger was worried about me because I had
had so many serious illnesses for a while there; Mono-
nucleosis, two viral pneumonias, a shingles flare up
(which indicates a lower immune system often), my first
case of VD, plus fungus etc in blood, plus hernia operation.
