Dear Dr. Pauly:

Thought you'd enjoy seeing my article which was published in The Advocate June 6.

I understand that both Eli Coleman and you will be presenting material on the female-to-gay male at the Benjamin Symposium next month. I am so glad!

As for me, my health is going downhill. I've been dragging around for months now and will get my fourth blood transfusion on Monday. They've diagnosed an opportunistic infection called "mycobacterium avium intercellulare," and are giving me experimental medication.

Hope you can send to me any written material on the female-to-gay male from the Symposium. My thanks in advance.

Warm regards,  
Lou Sullivan
