

THE TRANSSEXUAL VOICE

FEBRUARY 1994

\$3.00

POST-OP SUCCESS STORIES

Recently I have added a questionnaire to the renewal notices asking you what information you would like included the upcoming issues of THE TRANSSEXUAL VOICE. The most common request is for post-op success stories. (Everyone wants to read about others but doesn't seem to want to share their stories with us.)

The TS VOICE was first published in October of 1981. There wasn't nearly so much information available then as now; most of the subscribers had something to share. We had cover photos on several issues of some good looking men and women - most of them post-op.

I will continue to ask for your comments and suggestions and hopefully your contributions in the way of letters and articles.

I have received a request for a list of computer bulletin boards that includes transsexual participants.

I have also been asked if I know if any insurance covers sex-change surgery; I have no idea. About twenty years ago I heard of Medicaid paying for sex-change surgery on two occasions. There was a lot of controversial publicity about it. State officials promptly stated the procedure should never have been covered by Medicaid and no longer would be considered.

DON'T FORGET TO SEND YOUR QUESTIONS RELATED TO MEDICAL ISSUES TO DR. LEO WOLLMAN AND DR. JANICE DORN. YOU WILL NOT FIND BETTER QUALIFIED DOCTORS ANYWHERE TO ANSWER YOUR QUESTIONS. ADDRESS YOUR LETTERS TO THE DOCTOR OF YOUR CHOICE & TS VOICE. YOUR LETTERS WILL BE FORWARDED TO THEM AND THEIR ANSWERS WILL APPEAR IN AN UPCOMING ISSUE OF THE TS VOICE.

Take Care

Phoebe Smith

Dear Dr. Dorn:

I am a female pre-op transsexual, I understand that you have been studying and researching brain control of hormones and behavior for the past 30 years. Also, that you have worked extensively with transsexuals over the past 8 years. I have read that current research indicates that the most likely cause for gender dysphoria can be found in hormonal effects, determining sexually dependant characteristics of the fetus. In general, whether male or female are determined by concentrations of estrogen and testosterone in the mother. In the case of transgendered individuals, the basic anatomic features are of one sex, while the gender or structure of the brain is of the opposite sex. What is your opinion? Do you agree? Has this been legally labeled or diagnosed, according to DSM-III-R? Steve H.

Dear Steve;

Thank you for your letter in which you ask about the basic anatomic features of the brain being one sex while the gender is the opposite sex.

There is an area of extensive research linking hormonal exposure in the womb and gender identity. In addition, there have been some anatomic studies which show that one of the brain nuclei (the hypothalamus) varies in size with sexual orientation in men.

Psychosexual differentiation may be classified into 4 broad categories: (1) gender identity, defined as the identification of self as either male or female; (2) gender role, i.e., those aspects of behavior in which males and females differ from one another in our culture at this time; (3) gender orientation, which is the choice of erotic partner; and, (4) cognitive differences.

Studies in individuals who have been reared in a sex opposite to their chromosomal or gonadal sex provide strong evidence that gender identity is not determined primarily by sex chromosomes or prenatal sex steroid exposure. Rather, it is imprinted postnatally by words, attitudes, and comparisons of one's body with that of others. Gender identity usually agrees with the sex of assignment in the intersex patient, provided the child is raised unambiguously and appropriate surgical and hormonal therapy is instituted so that the child is clearly male or female phenotype. Under these circumstances, gender identity is usually established by 18- 30 months of age.

It appears that gender identity may be more flexible than previously thought. At puberty, sex steroids and socialization play a role in the function and maintenance of gender identity. However, the weight of evidence still strongly supports a significant role for environmental factors in determining gender identity.

I prefer a more comprehensive model to combine genetic, hormonal, and environmental factors in playing a role in the development of gender identity. For further reading I refer you to Byne, W., Parsons, Bruce, "Human Sexual Orientation, The Biologic Theories Reappraised", Archives of General Psychiatry, March, 1993.

Janice B. Dorn, M.D., Ph.D.

Dear Dr. Wollman:

Your comment in the T.S. VOICE concerning treatment of persons who want estrogen therapy and greater femenization but not a full reassignment was of great interest to me. This is the direction in which I wish to travel; however, I did not know it could be done.

My reason for wishing this is that I am going to be 65 this year and will retire. As I will not be engaging in sexual relations either as a man or woman they full reassignment will not be of benefit to me. The further femenization will be of great mental and physical help to me. As for this desire, it is not new, back in the late 70's I attended one of your lectures in a church in Hartford, Conn. At that time I was on hormone therapy; having started in England and later in the Boston area. I had to stop because of work and a family to support. I have remained frustrated all this time but still plugged along. In June of 94, I will retire and would like to take up where I left off.

Would you know of a doctor in the Myrtle Beach area who will take me on; or better yet if I were to travel to you would you be willing to treat me?

In either case I await your answer and thank you for taking the time to read this request. C.M.

Dear C.M.

I found your letter very interesting. Your self-awareness is profound and realistic.

Several of my current patients are in the 60 to 70 , and 70 to 80 age group - both pre-op and post-op.

It would be an honour for me to treat you.

Leo Wollman, M.D.

Dear Dr. Wollman:

Is there any medical procedure for hip enlargement to have a more female shape?

In the June issue of the TS VOICE your recommendation for hormone therapy is intramuscular injections of 40 mg of Delestrogen every two weeks and orally 2.5 mg Premarin every day. Should this stay the same the rest of your life or should it change at any time? Is there any difference in dosage as per your weight and height? Mine is 5'8" at 145 lbs. and 48 years old. Thank you very much. Rhonda

Dear Rhonda;

The only procedure I know to enlarge hips is a surgical one which utilizes your own fat cells collected from another part of your body.

The dosage schedule I recommended would be unchanged unless (1) you showed signs of liver dysfunction, (2) decided to return to a masculine status, or (3) post-op status the interval could be monthly rather than semi-monthly.

Weight and height have no bearing on the dosage.

Leo Wollman, M.D.

Dear Dr. Wollman;

I was wondering if anyone out there has gone on to adopt a family as a mother? I wondered if there were rules or severe "red tape" that worked against them. Motherhood is very dear to me but unfortunately not available naturally. I would appreciate any responses about this. (Please forward them to me through Phoebe.)

A second quest I had was for the medical department. I have often wondered if the female organs (Uterus, Ovaries, etc.) of one person could be transplanted into the male-to-female transsexual patient; or perhaps, could the Testicles of a male be donated to a female-to-male person? Is this perceivable at all? Stanley Biber mentioned a possibility of this occurring on a recent "Geraldo" show. I would be more than willing to donate my male organs in an exchange with a willing female-to-male hysterectomy and TS patient. I look forward to a published response or letter.

Phoebe, I appreciated your state-by-state information efforts even though it didn't work out. Readers be aware that we all need to join together if we want to help one another! We must all try to maintain a positive outlook because things aren't always going to go our way. Stephanie Danielles.

Dear Stephanie;

One of my patients (C.B.) adopted six boys after she had her sex reassignment surgery and married her male lover. She successfully "mothered" her sons through their college graduations. This she considered was her "mission" in life.

The transplants of sex organs from one patient to another is, as yet, unable to be done because of the rejection factor. When medical science has found a chemical to counter the rejection of tissue from another body, then these transplants may be feasible.

A positive attitude, I agree, is oftentimes a life-saver.

Leo Wollman, M.D.

PERSONAL LISTINGS

STUNNING PRE-OP TRANSSEXUAL SOUGHT - BY HANDSOME MID-30'S EXECUTIVE BODY BUILDER, 5'11", 180 LBS, NONSMOKER, LIGHT BROWN WAVY HAIR, AND FLORIDA TAN.
